Plant 292 Organization and personalities

1. Airframe Plant No. 292, Jaratov, was subordinate to the Ministry of Aviation Industry (MAI), which in turn was responsible to the Council of Ministers. Between the Ministry of Aviation Industry and the Plant Director was an intermediate echelon, the Directorate for Aircraft Procurement. This was a purely military organization and had nothing to do with the actual production or supervision of the plant. All direct supervisory control of the plant stemmed from MAI, which acted upon directives received from the Council of Ministers. (Refer to page 11, Organizational Chart of Plant 292.)

[redacted] Dementiyev (fma), who was the Minister of Aviation Industry.

2. Under the immediate control of the plant director, there were four main plant supervisory and administrative divisions and functions, e.g., engineering, personnel, welfare, and security. The latter three had no direct functions in connection with the production aspect of the plant. All this was the direct responsibility of the Chief Plant Engineer and all the shop chiefs were directly responsible to him. (Refer to page 12, Organizational Chart of Shop No. 32.)
3. In addition to these four main divisions of which the plant director had complete direct control, there were three other divisions indirectly subordinate to the plant director and directly responsible to higher echelons of command. (Refer to page 11.) These divisions were the First Section (Pervyy Oddel) directly subordinate to the MAI, the Technical Control Section (OIK - Oddel Tekhnicheskogo Kontroliya) directly subordinate to MAI, and the Military (SAV) Representatives Section subordinate to MAI through the intermediate echelon of the procurement offices.
4. The functions of the First Section were to monitor and control all the secret documents within the plant regardless of their nature, i.e., production or administrative. This section was also responsible for perfecting the personnel security checks and maintaining the files. This section was headed by Antonov (fma).
5. The plant OIK section was headed by Gorchkov (fma) and all the technical controllers (inspectors) throughout the plant were responsible to him through the chief inspector in each shop. At shop level, the inspector's section was referred to as Itak (Byuro Tekhnovogo Kontroliya - Shop Control Office). Each shop within the plant had a chief inspector, and his assistant was called the senior master inspector (starshiy kontrolnyy master). Then each section in a shop was assigned a chief inspector and each brigade in a section had one inspector.
6. In addition to the regular shop inspector described above, the plant OIK had an unknown number of military pilots assigned to it to perform the plant flight tests of the aircraft. Although they were military (SAV) pilots, they functioned for the plant and were not responsible to the Chief Military (SAV) Representative.

7. The Military Representative Section assigned to the plant was headed by Col. Kuzmin (fnu). (Refer to page 13, Organization of the Plant Military Representatives.) This section consisted of SAF officers who were assigned to various shops as military inspectors. In this respect, even though not assigned to a shop, they had the right to inspect the work performed therein and they were the final approving authority. This section also had an unknown number of military (SAF) pilots who performed the final acceptance flight tests.
